COVID-19 IN MISSOURI

Missouri COVID-19 Dashboard provides
COVID-19 data for state and county
levels:

COVID-19 in Missouri

NOTE on dates: This dashboard was last updated in the afternoon of 12/5/2021 and includes data reported through 12/4/2021. All 7-day metrics are based on the date a test or death occurred, and are subject to a 3-day delay to ensure data are accurate and complete. See FAQ for details.
Range for 7-Day metrics: 11/26/2021 through 12/2/2021

COVID-19 in Missouri to Date

COVID-19 in Missouri - Past 7 Days (based on date of occurrence)

For the maps and bar charts, select what you'd like to display:
See the FAQs to learn more about what each metric means.

Cases and Deaths in Vaccinated Missourians

What is a breakthrough infection? A breakthrough infection is a COVID-19 case that occurs in someone who is fully vaccinated, meaning 14 or more days after completing the recommended doses of an authorized vaccine.

This dashboard was last updated on 12/5/2021, with the most recent testing data (12/4/2021), vaccine data (12/3/2021), and breakthrough data (12/3/2021). Breakthrough case and death data will be updated Monday through Friday, all other data will be updated daily. All metrics below include **reported** cases and deaths since 1/1/2021.

Fully Vaccinated Missourians: **3,171,482**

Cases

Percent of **fully vaccinated** people who developed infection
(among all vaccinated persons):

1.94%

(Total Breakthrough Cases: 61,609 / Total Fully Vaccinated People: 3,171,482)

Percent of cases in **unvaccinated or partially vaccinated** people
(among all COVID-19 cases):

87%

(Total Cases Non-Fully Vaccinated: 402,073 / Total Cases: 463,682)

Deaths

Percent of **fully vaccinated** people who died of COVID-19
(among all vaccinated persons):

0.02%

(Total Breakthrough Deaths: 712 / Total Fully Vaccinated People: 3,171,482)

Percent of deaths in **unvaccinated or partially vaccinated** people (among all COVID-19 deaths):

90%

(Total Deaths Non-Fully Vaccinated: 6,424 / Total Deaths: 7,136)

People with certain underlying conditions are at greater risk of breakthrough COVID-19 infections, severe illness, hospitalization and death.
Click on the CDC image to the right to learn more.

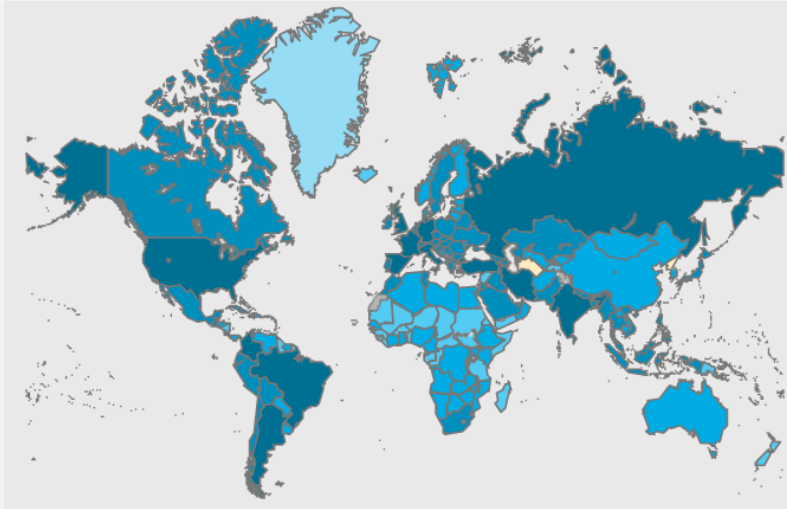

COVID-19

Worldwide as of December 3, 2021

Total Cases: 263,563,622

Total Deaths: 5,232,562

Total Vaccine Doses Administered: 7,864,123,038

* Source: World Health Organization

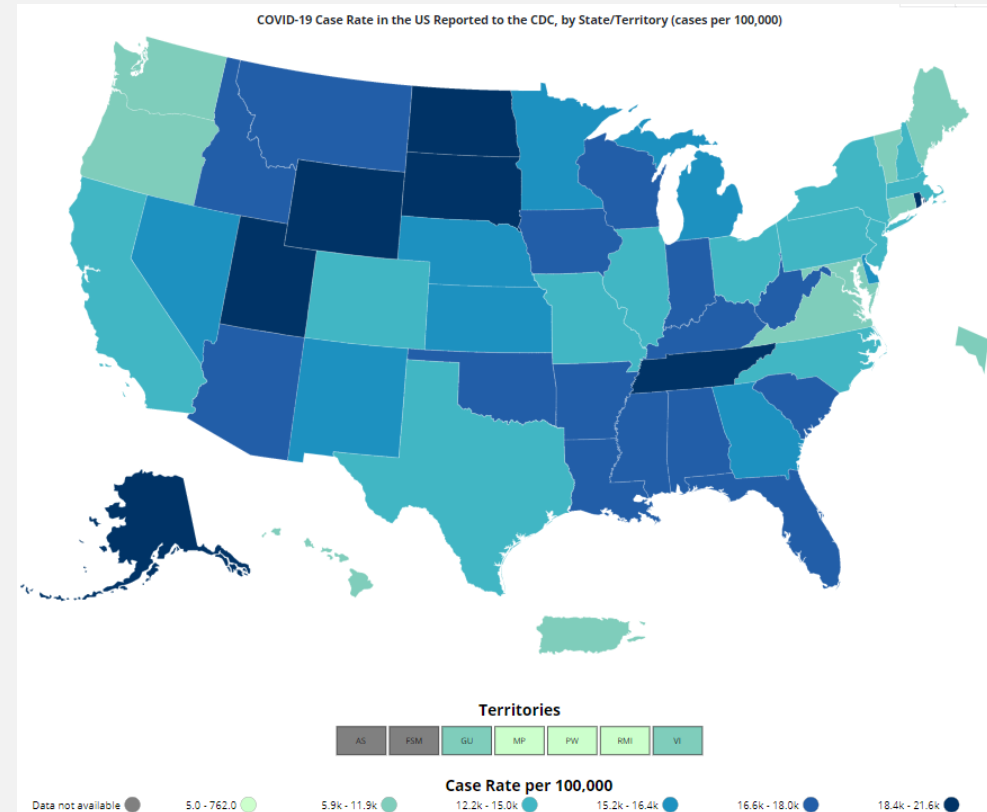

You likely notice a difference in the case counts if you are following other organizations, such as Johns Hopkins. The CDC updates case totals each day, reporting the cases numbers from the previous day. Other sites use sources for real time counts.

United States as of December 4, 2021

Total Cases: 48,918,251

Total Deaths: 784,893

Total Vaccine Doses Administered: 470,297,846

* Source: Center for Disease Control and Prevention

OMICRON VARIANT B.1.1.529

SARS-CoV-2 variant, B.1.1.529, now named Omicron, was first detected in specimens collected on November 11, 2021 in Botswana and on November 14, 2021 in South Africa.

On November 26, 2021, WHO named the virus Omicron and classified it as a Variant of Concern (VOC).

On November 30, 2021, the United States designated Omicron as a Variant of Concern

On December 1, 2021 the first confirmed U.S. case of Omicron was identified.

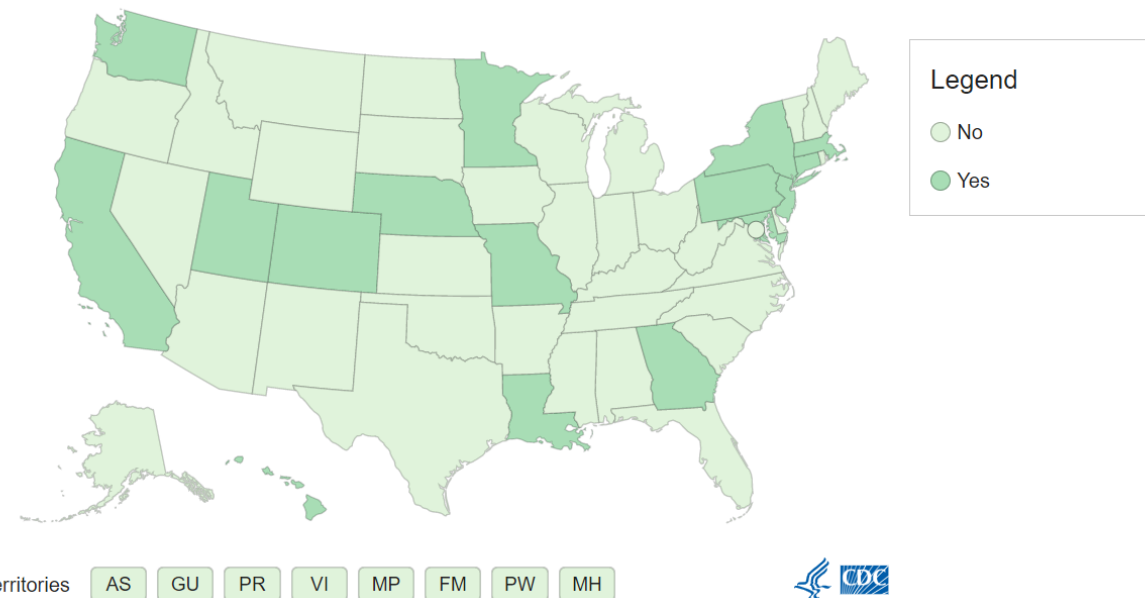

On December 3, 2021, the first confirmed Missouri case of Omicron was identified.

Despite the increased attention of the Omicron Variant, the Delta variant continues to be the main variant circulating in the U.S.

Where has Omicron been Detected in the United States

CDC is working with state and local public health officials to monitor the spread of Omicron. This map shows the states that have detected at least one case of COVID-19 illness caused by the Omicron variant. Omicron will be included in variant surveillance data on CDC's [COVID Data Tracker](https://www.cdc.gov/covid-data-tracker/) when it can be reliably estimated at a low frequency.

US COVID-19 Cases Caused by the Omicron Variant

MISSOURI COVID-19 VACCINE DASHBOARD

[HTTPS://COVIDVACCINE.MO.GOV/DATA/](https://COVIDVACCINE.MO.GOV/DATA/)

Overall Vaccinations in Missouri

This dashboard was last updated on 12/5/2021 and contains data on vaccinations administered through 12/3/2021. Historical numbers, especially over the most recent few days, will update as providers report data to the state. Differences between this dashboard's numbers and those on CDC's dashboard are primarily due to timing.

COVID-19 Vaccine Dose Details

Missouri Expands Eligibility for COVID-19 Booster Shots

As of
11/19/2021

- Those who are 18 or older & fully vaccinated against COVID-19 are eligible for a booster shot:
 - At least 2 months after a 1-dose vaccine of Johnson & Johnson, or
 - At least 6 months after a 2-dose vaccine of Pfizer or Moderna.

Research shows that all COVID-19 vaccines authorized in the United States continue to be highly effective at preventing severe illness and death.

Atchison County Health
Department
is taking
appointments for

Moderna

Pfizer (adult & pediatric)
Janssen/J&J

All types: initial, 2nd & booster doses
Days offered: Tuesdays & Thursdays

Millions of people are eligible to receive a booster shot and will benefit from additional protection.

However, this action should not distract from the critical work of ensuring that unvaccinated people take the first step and get an initial **COVID-19** vaccine.

More than 65 million Americans remain unvaccinated, leaving themselves – and their children, families, loved ones, and communities – vulnerable.

✓

Don't Wait.
Vaccinate!
Protect yourself and your loved ones.

Getting vaccinated is the only way to make sure that we **stamp out COVID-19**. Vaccines are safe and available now. Get your vaccination today!
